National Science Day

02nd March 2026 (Monday)

The faculty of Science and Technology (FST) in collaboration with the Internal Quality Assurance Cell (IQAC) organized National Science Day on 2nd March, 2026 in the IUHP campus to honour the discovery of the Raman Effect by C. V. Raman. This day highlights the importance of science in our daily lives and encourages students to develop scientific thinking. The event witnesses' enthusiastic participation from students of Chemistry, Physics, Botany and Zoology departments. Students actively took part in the program and presented various charts, working models and experiments. The charts prepared by students clearly explained scientific concepts through diagrams and illustrations. Many students also demonstrated working models, which helped in understanding the practical applications of scientific principles. In addition, several live experiments were performed during the event, attracting great interest from the audience and making the learning experience more interactive and engaging.

The exhibition created a vibrant scientific atmosphere in the campus. The celebration was informative and inspiring. It motivated students to develop curiosity, creativity and interest in science. The program was graced by the presence of our worthy Vice-Chancellor, Prof. Keshav Sharma, Registrar, Dr. Bharat Bhushan and Head of the department, Dr. R K Bhardwaj. The Hon'ble Vice-Chancellor Sir delivered inspiring words of wisdom, encouraging students to develop scientific temper and innovative ideas for nation-building. He also motivated students to actively participate in research activities.

Photographs of the event showcasing student presentations, charts, working models, and live experiments are attached herewith.
